TECHNICAL PROJECTS

5Stack – Social media – Current

- Worked with a team of four to develop a functional social media platform, showcasing strong collaboration and technical expertise primarily working on backend with **PHP** and **JavaScript**, and some **HTML**.
- Designed and implemented user features, including login, logout, user registration, and account management.
- Helped to develop interactive capabilities such that users could create content and like each other's content.

Kew's Quest: Dragon's Lair – Interactive Game – 2024

- Developed, in collaboration with a partner, a single-player side-scrolling game in **C#** using the **Godot game engine**, showing teamwork and creativity.
- Designed game play engagement through the addition of collecting gemstones and coins for increasing scores, while dynamic obstacles include moving monsters to avoid.
- Led the sourcing for the game layout and character design to ensure a more immersive, visually appealing environment for the players.

Mousin' Around – Interactive Game – 2023

- Developed a clicker game with multiple difficulty levels, providing a customizable experience for players in **JavaScript** with the use of **HTML** and **CSS** alongside **Bootstrap**.
- Designed the characters using **SVG**, including features to track high scores, automatically resetting after a loss to maintain fair gameplay.
- Ensured accurate real-time score tracking throughout the game, enhancing the user experience.

WORK EXPERIENCE

Drag's Detailing, Hamilton ON -- Automotive Detailer

MAY 2023- PRESENT
